

Transmission of Fed Announcements to Emerging Economies: What Determines Market Reactions?

**Prachi Mishra
Reserve Bank of India**

**(joint with Papa N'Diaye and Lam Nguyen
IMF)**

**Emerging Market Finance Conference
Mumbai
December 18-20, 2014**

The views expressed are those of the authors and do not necessarily represent those of the RBI.

Market volatility in emerging markets following FOMC announcements in 2013-14

Figure 2B: Government Bond Yields in Local Currency
(Changes in Basis Points)

Main question

- What factors influenced markets' reaction
 - Financial depth

Preview of main findings

- Countries with deeper domestic financial markets experienced smaller increases in government bond yields around events of volatility in 2013-14
- Controlling for time-invariant country characteristics, and time varying macroeconomic fundamentals

Plan of the talk

- Literature
- Data
- Methodology
- Results
- Conclusions

Literature

- Transmission of UMP to emerging markets (BIS, 2014; IMF, 2014)
- Nascent literature on importance of country characteristics in determining market reaction
 - Ahmed, Coulibaly, and Zlate, 2014
 - Eichengreen and Gupta, 2014
 - Aizenman, Binici, and Hutchinson, 2014

Contribution of this study

- Focus on a narrower question but dig deeper
- Identification strategy
 - Narrow time windows around dates of FOMC meetings and minutes in 2013-14
 - Main advantages of the framework
 - Other events over 3 month period
 - Monetary policy actions by other industrial central banks
 - Policy responses by individual countries

Data

- 26 emerging markets
- Period: January 1st , 2013 – January 22, 2014
- Long-term government bond yields (10-year)
- Financial depth
 - bank credit, M2, M3, stock market capitalization (all relative to GDP)
- Source: Bloomberg, IFS, Haver Analytics, IMF

2- step methodology

Step 1

- Market reactions around “events” and define negative events
 - Dates of press statements of FOMC meetings and release of minutes in 2013-14

Step 2

- Interaction of negative event dummy with country characteristics

Step 1: market reaction and events

$$\Delta y_{c,i-m,i+m} = \alpha + \beta * D_i$$

i = Event

Dates of FOMC meetings and minutes

m: 2

Δy : Change in bond yields

Negative event: yields increase significantly

Positive event: yields decrease significantly

Non-event: neither positive nor negative

Step 2. Interaction framework

$$\Delta y_{c,i-m,i+m} = \alpha + \beta * D_i^N + \gamma x_{c,i-q} + \delta D_i^N * x_{c,i-q} + S_c$$

D_i^N = Negative event x : country characteristic

S_c Country fixed effects

All standard errors are clustered at the country-level

Key hypothesis

$\delta < 0$ For “good” country characteristic

Table 1. FOMC meetings and minutes: 2013

Meeting No.	Date of Meeting		Release of Minutes
1	January	29-30	20-Feb-13
2	March	19-20	10-Apr-13
3	April/May	30-1	22-May-13
4	June	18-19	10-Jul-13
5	July	30-31	21-Aug-13
6	September	17-18	9-Oct-13
7	October	16	
8	October	29-30	20-Nov-13
9	December	17-18	8-Jan-14

Markets react negatively following tapering talks

Magnitudes are economically significant

Figure 5. Effect on Bond Yields from one standard deviation higher vulnerability (Annualized, Jan 2013-Jan 2014)

Conclusions

- Evidence for the importance of depth of domestic financial markets in determining market reactions
- Implications
 - Rather than treating EMs as a single asset class, markets differentiate across emerging economies based on country characteristics, particularly financial depth.
 - Deepening domestic financial markets can provide a cushion against external shocks
