Presentation at the 2nd NSE-NYU Indian Financial Markets Conference, Bombay

August 5, 2014

Background

- Advances in technology have altered the microstructure of the markets.
- Algorithmic trading (AT, or its close kin, HFT) dominates trading activity worldwide.
- Benefits indisputable, but concerns regarding the negative externalities imposed by these traders.
- AT/HFT has been a subject of intense focus amongst the regulators. Pressure on the regulators to 'do something'.
- Consequence: Several policy proposals being contemplated to curb AT/HFT activity (MiFID II, HFT Act etc).

A regulatory intervention is justified if

- 1. there is an identified market failure.
- 2. the proposed intervention addresses the market failure appropriately.
- 3. the costs are outweighed by the gains to the society from the intervention.

When the above considerations are ignored, the intervention can result in unintended consequences.

- **This paper**: examines the effect of one such intervention in the context of Indian equity markets.
- The intervention: Charge fees/penalise traders with high orders to trades (OTR) ratio.

- A regulatory intervention is justified if
 - 1. there is an identified market failure.
 - 2. the proposed intervention addresses the market failure appropriately.
 - 3. the costs are outweighed by the gains to the society from the intervention.

When the above considerations are ignored, the intervention can result in unintended consequences.

- This paper: examines the effect of one such intervention in the context of Indian equity markets.
- The intervention: Charge fees/penalise traders with high orders to trades (OTR) ratio.

The question:

- 1. Did the intervention address the market failure?
- 2. Were there some unintended consequences of the intervention?

Intended target: Reduce the high levels of OTR.

- Intended target: Reduce the high levels of OTR.
- Market failure: Negative externality by way of
 - 1. Increased load on exchange's infrastructure,
 - 2. Lot of such orders could be unproductive in nature by rarely resulting into a trade. This raises concerns such as
 - 2.1 Increased latency in order placement and execution for other traders,

- 2.2 Market manipulation.
- The solution prescribed: Impose a fee if the OTR crosses a certain threshold.
- Expected outcome: Costs of high OTR internalised by those who generate it, resulting in lower OTR.
- Unexpected outcome: If not designed appropriately, has potential to adversely affect market quality, liquidity provisioning.

- Intended target: Reduce the high levels of OTR.
- Market failure: Negative externality by way of
 - 1. Increased load on exchange's infrastructure,
 - 2. Lot of such orders could be unproductive in nature by rarely resulting into a trade. This raises concerns such as
 - $2.1\,$ Increased latency in order placement and execution for other traders,
 - 2.2 Market manipulation.
- The solution prescribed: Impose a fee if the OTR crosses a certain threshold.
- Expected outcome: Costs of high OTR internalised by those who generate it, resulting in lower OTR.
- Unexpected outcome: If not designed appropriately, has potential to adversely affect market quality, liquidity provisioning.
- Our focus: Analyse the intervention in terms of these two outcomes was the expected effect realised? were there unexpected consequences?

OTR fee at NSE: An interesting case study

- Internationally, exchanges including the NASDAQ, NYSE Euronext, OSE, Borsa Italiana, TSX have implemented the fee.
 - But the fee implementation was due to regulatory pressure.
 - Few studies examining the impact include Jorgensen et al (2014), Friederich and Payne (2013), Malinova et al (2013).

OTR fee at NSE: An interesting case study

- Internationally, exchanges including the NASDAQ, NYSE Euronext, OSE, Borsa Italiana, TSX have implemented the fee.
 - But the fee implementation was due to regulatory pressure.
 - Few studies examining the impact include Jorgensen et al (2014), Friederich and Payne (2013), Malinova et al (2013).
- At NSE,
 - 1. the fee implementation in 2009 was an **exchange** initiative (to reduce load on its infrastructure).

2. the fee hike in 2012 was due to regulatory initiative.

- 1. **2009-10**: Fee applied uniformly across **all** market participants and order types.
- 2. **2012-13**: Fee applicable on **algo** orders only on all order types with the following exemptions:
 - 2.1 Orders within +/-1% LTP price limits not included.
 - 2.2 Members covered under the LES excluded.
 - 2.3 Additional penalty of no trading in the first 15 minutes on the next trading day if OTR > 500.

- 3. Fee computed at a member level on a daily basis.
- 4. Fee implemented **only** on the derivatives segment.
- Offers a neat research design to evaluate the impact of the fee by using cash market as a control.

Implementation details:

- 1. **2009-10**: Fee applied uniformly across **all** market participants and order types.
- 2. **2012-13**: Fee applicable on **algo** orders only on all order types with the following exemptions:
 - 2.1 Orders within +/-1% LTP price limits not included.
 - 2.2 Members covered under the LES excluded.
 - 2.3 Additional penalty of no trading in the first 15 minutes on the next trading day if OTR > 500.

- 3. Fee computed at a member level on a daily basis.
- 4. Fee implemented **only** on the derivatives segment.
- Offers a neat research design to evaluate the impact of the fee by using cash market as a control.
- We focus on the 1st and the last event:
 - 1. Event 1: Fee implementation by the exchange in 2009.
 - 2. Event 2: Fee doubled by the regulator in 2013.

What we find

Impact of Event 1:

 A significant reduction in the average OTR after the event, indicating that the exchange managed to achieve what it intended.

 However, this impact was accompanied by a significant deterioration in the market quality variables – an unintended consequence.

What we find

Impact of Event 1:

- A significant reduction in the average OTR after the event, indicating that the exchange managed to achieve what it intended.
- However, this impact was accompanied by a significant deterioration in the market quality variables – an unintended consequence.

Impact of Event 2:

1. The event, did not see any shift. Neither in the trading behavior of the participants by way of OTR, nor in the market quality variables.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

2. Indicates the insignificance of the event.

Research setting

Data details

Period of the study:

- 1. Event 1: Introduction of OTR fee on 01 Oct 2009.
 - a) Pre event: Jun Aug 2009
 - b) Post event: Oct Dec 2009
- 2. Event 2: Doubling of OTR fee on 27 May 2013.
 - a) Pre event: Mar May 2013
 - b) Post event: Jun Jul 2013
- **Sample**: Nifty stocks in the period between 2009 and 2013.
- Segment analysed: Near month single stock futures.
- Data used: Tick by tick orders and trades data, with flags identifying if an order or a trade is AT or non AT, and trader category. Flag on type of order event: entry, modification or cancellation.

Measurement

◆□ ▶ < 圖 ▶ < 圖 ▶ < 圖 ▶ < 圖 • 의 Q @</p>

OTR measurement

- At an order level, compute
 - 1. OTR = Number of orders events / (1 + Number of trades)
 - 2. OTR intensity = OTR/(Average time between modifications)

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

- For each stock, we compute value weighted average OTR for the day.
- For the day, we compute market cap weighted OTR across all stocks.

Market quality measures

Liquidity

- 1. Transactions costs
 - 1.1 QSPREAD (in %): (best ask best sell) \times 100 / mid-quote price.
 - 1.2 Price impact (PRICE IMPACT, %): execution cost of a market order at a size of Rs 250,00 relative to the mid-quote price.
- 2. Depth
 - 2.1 TOP1DEPTH (in Rs.): Rupee depth available at the best bid and ask prices.
 - 2.2 TOP5DEPTH (in Rs.): Cumulated Rupee depth available at top five best bid and ask prices.
 - 2.3 DEPTH (# of shares): Average of the outstanding buy side and sell side number of shares.
- 3. Amihud's illiquidity measure, ILLIQ: Ratio of daily absolute stock return to traded value.

Market quality measures (contd..)

Efficiency

- 1. VR: Ratio of ten-minutes variance of returns to two times the variance of five-minutes returns in a day.
- 2. BASIS (%): Difference in the actual and implied futures price, relative to the spot price.

Volatility

- 1. Price risk, RVOL: Standard deviation of five-minutes returns.
- 2. Liquidity risk, LRISK: Standard deviation of PRICE IMPACT.

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ □ のへで

3. Basis risk, (σ_{BASIS}): Standard deviation of the basis.

Methodology

◆□ ▶ < 圖 ▶ < 圖 ▶ < 圖 ▶ < 圖 • 의 Q @</p>

Impact evaluation: The approach

On OTR and OTR intensity:

1. Estimate a fixed effects panel regression specified as:

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

2. Hypothesis: If the event had an impact on OTR, $\beta_1 < 0$.

Impact evaluation: The approach

On OTR and OTR intensity:

1. Estimate a fixed effects panel regression specified as:

```
\begin{aligned} \text{VWTD-OTR}_{i,t} &= \alpha_i + \beta_1 \times \text{FEEDUMMY}_t + \beta_2 \times \text{AT-INTENSITY}_{i,t} + \\ \beta_3 \times \text{MCAP}_{i,t} + \beta_4 \times \text{INVERSE-PRICE}_{i,t} + \\ \beta_5 \times \text{NIFTY-VOL}_t + \epsilon_{i,t} \end{aligned}
```

2. Hypothesis: If the event had an impact on OTR, $\beta_1 < 0$.

On market quality:

- 1. The fee only implemented on derivatives, not on cash.
- 2. Use cash market as a control to evaluate the impact using a DID regression:

$$\begin{split} \text{MKT-QUALITY}_{i,t} &= \alpha + \beta_1 \times \text{TREATED}_i + \beta_2 \times \text{FEEDUMMY}_t + \\ \beta_3 \times \text{TREATED}_i \times \text{FEEDUMMY}_t + \beta_4 \times \text{AT-INTENSIT} \\ \beta_5 \times \text{MCAP}_{i,t} + \beta_6 \times \text{INVERSE-PRICE}_{i,t} + \\ \beta_7 \times \text{NIFTY-VOL}_t + \epsilon_{i,t} \end{split}$$

3. Hypothesis: If the event did not have any impact on market quality, $\beta_3 = 0$.

Results

Impact on OTR: Panel regression

	Event 1			Event 2		
	$\hat{\beta}_1$	t-stat	R^2	$\hat{\beta_1}$	t-stat	R^2
OTR	-0.65	-4.60	0.11	0.11	0.71	0.01
OTR-INTENSITY	-0.39	-5.29	0.11	48.35	5.00	0.06

Significant impact on OTR and OTR intensity post event 1, but no such impact post event 2.

Impact on market quality: DID regression

 $\begin{aligned} \text{MKT-QUALITY}_{i,t} &= \alpha + \beta_1 \times \text{TREATED}_i + \beta_2 \times \text{FEEDUMMY}_t + \\ \beta_3 \times \text{TREATED}_i \times \text{FEEDUMMY}_t + \beta_4 \times \text{AT-INTENSITY}_{i,t} + \\ \beta_5 \times \text{MCAP}_{i,t} + \beta_6 \times \text{INVERSE-PRICE}_{i,t} + \\ \beta_7 \times \text{NIFTY-VOL}_t + \epsilon_{i,t} \end{aligned}$

Adverse impact on the informational efficiency in terms of basis post event 1. No effect post event 2.

A closer look at the Event 2 implementation

◆□ ▶ < 圖 ▶ < 圖 ▶ < 圖 ▶ < 圖 • 의 Q @</p>

The 1% LTP limit: % of orders that breached the limit

Event 2:

	Pre	Post	p-value
Average	1.60	1.39	0.07
Median	1.07	1.02	0.24

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

The 1% LTP limit: % of orders that breached the limit

Event 2:

	Pre	Post	p-value
Average	1.60	1.39	0.07
Median	1.07	1.02	0.24

Question: If on an average, the % of orders that breached the price limit on a stock in a day was less than 2%, was that the intended target?

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ □臣 = のへで

Conclusion

- Worldwide, a lot of concerns about AT/HFT penetration in to the markets.
- The need for a corrective action could be justified.

- Worldwide, a lot of concerns about AT/HFT penetration in to the markets.
- The need for a corrective action could be justified. But,
- Before taking the action, important to know where the problem lies.

- The need for a corrective action could be justified. But,
- Before taking the action, important to know where the problem lies.
- For Event 1, the analysis suggests
 - 1. that the exchange knew the root cause of the problem, and what was to be achieved (and how). However,
 - the design was sub-optimal, since the fee adversely affected the market quality.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

The analysis for Event 2 suggests

- Worldwide, a lot of concerns about AT/HFT penetration in to the markets.
- The need for a corrective action could be justified. But,
- Before taking the action, important to know where the problem lies.
- For Event 1, the analysis suggests
 - 1. that the exchange knew the root cause of the problem, and what was to be achieved (and how). However,
 - 2. the design was sub-optimal, since the fee adversely affected the market quality.
- The analysis for Event 2 suggests
 - 1. that the regulator issued the guidelines, motivated by the need to 'do something'. But,
